# **Patient Documentation Consideration Checklist**

Date of Service: \_\_\_\_\_

# Potential Diagnosis Details:\*

| Established CVD (With Primary Hyperlipidemia) | Familial Hypercholesterolemia (FH)  |
|---|---|
| Acute coronary syndrome                       | □ Simon Broome diagnostic criteria met                                    |
| □ History of myocardial infarction            | Dutch Lipid Clinic Network score:   |
| □ Stable or unstable angina                   | Other:  |
| Coronary or other arterial revascularization  |   |
| □ Stroke                                      | Please use the QR code to access<br>further information with the Repatha® |
| Peripheral artery disease (PAD)               | Coding Guide, including a list<br>Illustrative ICD-10 codes.              |
| Other:  |   |

#### **History Considerations:\***

| Recent Lipid Panel, Inclu                                       | Date Measured |        |        |        |               |         |          |  |  |
|---|---------------|--------|--------|--------|---------------|---------|----------|--|--|
| Recent LDL-C level:mg/dL  |               |        |        |        |               |         |          |  |  |
| Current and Previous Lipid-lowering Therapy                     |               |        |        |        |               |         |          |  |  |
| □ Atorvastatin  |               | 🗖 10mg | 🗖 20mg | 🗖 40mg | <b>□</b> 80mg | Current | Previous |  |  |
| Pravastatin   |               | 🗖 10mg | 🗖 20mg | 🗖 40mg | 🗖 80mg        | Current | Previous |  |  |
| □ Rosuvastatin  | 🗖 5mg         | 🗖 10mg | 🗖 20mg | 🗖 40mg |               | Current | Previous |  |  |
| □ Simvastatin   | 🗖 5mg         | 🗖 10mg | 🗖 20mg | 🗖 40mg | <b>□</b> 80mg | Current | Previous |  |  |
| Ezetimibe (10 mg)   |               |        |        |        |               | Current | Previous |  |  |
| Other:  |               |        |        |        |               | Current | Previous |  |  |
| History of Statin Intolera                                      | Date          |        |        |        |               |         |          |  |  |
| Intolerance symptoms:   |               |        |        |        |               |         |          |  |  |
| □ Rhabdomyolysis □ Muscle pain or weakness                      |               |        |        |        |               |         |          |  |  |
| □ Elevated creatine kinase (CK) □ Elevated liver function tests |               |        |        |        |               |         |          |  |  |
| Symptoms reappeared after statin re-challenge with a lower dose |               |        |        |        |               |         |          |  |  |
| Contraindication:   |               |        |        |        |               |         |          |  |  |

CVD = cardiovascular disease; LDL-C = low-density lipoprotein cholesterol.

Consult payer coverage policy for prior authorization criteria and documentation requirements.

#### **INDICATION**

**Repatha®** is indicated:

• In adults with established cardiovascular disease to reduce the risk of myocardial infarction, stroke, and coronary revascularization

### **IMPORTANT SAFETY INFORMATION**

• **Contraindication:** Repatha<sup>®</sup> is contraindicated in patients with a history of a serious hypersensitivity reaction to evolocumab or any of the excipients in Repatha<sup>®</sup>. Serious hypersensitivity reactions including angioedema have occurred in patients treated with Repatha<sup>®</sup>.

Please see additional Important Safety Information on the next page.

## **IMPORTANT SAFETY INFORMATION**

- **Contraindication:** Repatha<sup>®</sup> is contraindicated in patients with a history of a serious hypersensitivity reaction to evolocumab or any of the excipients in Repatha<sup>®</sup>. Serious hypersensitivity reactions including angioedema have occurred in patients treated with Repatha<sup>®</sup>.
- Hypersensitivity Reactions: Hypersensitivity reactions, including angioedema, have been reported in patients treated with Repatha<sup>®</sup>. If signs or symptoms of serious hypersensitivity reactions occur, discontinue treatment with Repatha<sup>®</sup>, treat according to the standard of care, and monitor until signs and symptoms resolve.
- Adverse Reactions in Adults with Primary Hyperlipidemia: The most common adverse reactions (>5% of patients treated with Repatha<sup>®</sup> and more frequently than placebo) were: nasopharyngitis, upper respiratory tract infection, influenza, back pain, and injection site reactions.

From a pool of the 52-week trial and seven 12-week trials: Local injection site reactions occurred in 3.2% and 3.0% of Repatha®-treated and placebo-treated patients, respectively. The most common injection site reactions were erythema, pain, and bruising. Hypersensitivity reactions occurred in 5.1% and 4.7% of Repatha®-treated and placebo-treated patients, respectively. The most common hypersensitivity reactions were rash (1.0% versus 0.5% for Repatha® and placebo, respectively), eczema (0.4% versus 0.2%), erythema (0.4% versus 0.2%), and urticaria (0.4% versus 0.1%).

• Adverse Reactions in the Cardiovascular Outcomes Trial: The most common adverse reactions (>5% of patients treated with Repatha® and more frequently than placebo) were: diabetes mellitus (8.8% Repatha®, 8.2% placebo), nasopharyngitis (7.8% Repatha®, 7.4% placebo), and upper respiratory tract infection (5.1% Repatha®, 4.8% placebo).

Among the 16,676 patients without diabetes mellitus at baseline, the incidence of new-onset diabetes mellitus during the trial was 8.1% in patients treated with Repatha® compared with 7.7% in patients that received placebo.

- Adverse Reactions in Pediatric Patients with HeFH: The most common adverse reactions (>5% of patients treated with Repatha<sup>®</sup> and more frequently than placebo) were: nasopharyngitis, headache, oropharyngeal pain, influenza, and upper respiratory tract infection.
- Adverse Reactions in Adults and Pediatric Patients with HoFH: In a 12-week study in 49 patients, the adverse reactions that occurred in at least two patients treated with Repatha<sup>®</sup> and more frequently than placebo were: upper respiratory tract infection, influenza, gastroenteritis, and nasopharyngitis. In an open-label extension study in 106 patients, including 14 pediatric patients, no new adverse reactions were observed.
- Immunogenicity: Repatha<sup>®</sup> is a human monoclonal antibody. As with all therapeutic proteins, there is potential for immunogenicity with Repatha<sup>®</sup>.

### **INDICATIONS**

#### Repatha® is indicated:

- In adults with established cardiovascular disease to reduce the risk of myocardial infarction, stroke, and coronary revascularization
- As an adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-C)-lowering therapies, in adults with primary hyperlipidemia, including heterozygous familial hypercholesterolemia (HeFH), to reduce LDL-C
- As an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 10 years and older with HeFH, to reduce LDL-C
- As an adjunct to other LDL-C-lowering therapies in adults and pediatric patients aged 10 years and older with homozygous familial hypercholesterolemia (HoFH), to reduce LDL-C

The safety and effectiveness of Repatha<sup>®</sup> have not been established in pediatric patients with HeFH or HoFH who are younger than 10 years old or in pediatric patients with other types of hyperlipidemia.

#### Please see accompanying full Prescribing Information.
